

200kWh Photovoltaic Container for Mining in Benin

Overview

Can solar power be used in Sub-Saharan Africa?

Sub-Saharan Africa, which accounts for approximately 80% of the global population without electricity, stands to benefit significantly. For instance, PV systems on mining lands in this region could generate an estimated 441,396.9 GWh year⁻¹, which is sufficient to provide power to nearly 120 million people.

How much power can a PV system generate in 2023?

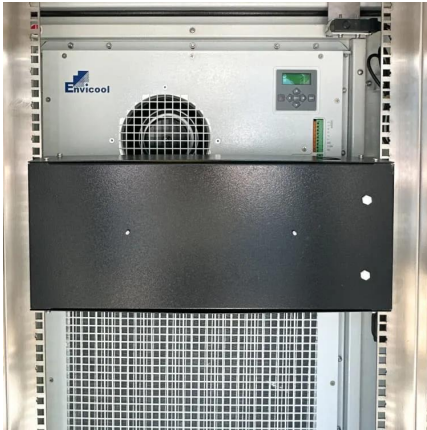

We estimate that the theoretical power generation capacity of PV systems installed across all mine sites globally (45,707.28 km²) could reach 5,807,713 GWh year⁻¹, approximately 3.5 times the global PV electricity output in 2023 (1,641,577 GWh) (Figure 1B).

Should PV systems be installed on reclaimed mining land?

The deployment of PV systems on reclaimed mining land thus holds the potential to generate economic returns while simultaneously promoting environmental restoration, resulting in a mutually beneficial outcome (Figure 1A).
