

MODERNIZATION SOLAR

2kw solar panel grid-connected system

Overview

How much power does a 2KW Solar System produce?

Our 2 kW solar systems feature DIY solar kits, which will produce at least 2kW (or 2,000 watts) of power. This translates to approximately 175 to 375 kilowatt-hours (kWh) per month depending on your system choice, location and other factors. Choose between a 2kW solar kit with microinverters and a 2.4kW off-grid kit.

Why should you choose a 2KW Solar System?

By relying on your solar panels to power your home or business, you can significantly reduce your dependence on the grid and enjoy substantial savings on your electricity bills. It is worth noting that any excess electricity generated by your 2kW solar system can be sold back to the grid.

What is the best 3KW on-grid solar power system?

Loom solar introduces the best 3kW on-grid solar power system for homes. A 3kW solar system generates approx.15 units every day from morning 8 am to 5 pm which is sufficient to run multiple air conditioners along with refrigerators, televisions, fans, and lights during the day in a big house.

What is a grid tied solar system?

A grid tied solar system is the most popular and cost-effective way to harness solar energy for your home or business. Unlike off-grid systems that require expensive battery storage, grid-tied systems connect directly to your local utility grid, allowing you to generate clean electricity while maintaining reliable power access 24/7.
