What are energy storage contracts?

These contracts allocate the risks of project development, construction, and performance between the parties and include the price that will be paid by the utility for the resource or the energy storage services that are to be provided.

Are energy storage projects a meter utility scale project?

The majority of new energy storage installations over the last decade have been in front of the meter utility scale energy storage projects that will be developed and constructed pursuant to procurement contracts entered into between project developers (or a special-purpose project company owned by such developers) and the utilities.

How much energy storage was deployed in 2024?

Approximately 11.9 gigawatts (GW) of storage was deployed in 2024. In only the third quarter of 2024, and despite mounting concerns over potential trade and policy developments, the US storage market added a record-setting 3.8 GW of energy storage—an 80% increase compared to the prior year.
