

# **Anti-reflective solar glass in South America**

## Overview

---

Do solar modules need anti-reflection coatings?

This loss can be mitigated by the use of anti-reflection coatings, which now cover over 90% of commercial modules. This review looks at the field of anti-reflection coatings for solar modules, from single layers to multilayer structures, and alternatives such as glass texturing.

Are solar cover glass coatings multifunctional?

Anti-soiling is the most common property in addition to anti-reflection, and coatings for solar panels should be multifunctional, with other properties such as photoactivity, self-healing, and anti-microbial properties under investigation. Mozumder et al. offers a detailed review of multifunctionality for solar cover glass coatings. 5.

Are anti-reflection coatings durable?

The materials and deposition methods used for such coatings are reviewed and a discussion around the durability of anti-reflection coatings is presented, with recent work showing that the current industry standard porous silica coatings are vulnerable to abrasion, as well as chemical thinning and humidity-related degradation.

Do PV modules have anti-reflection coatings?

These reflection losses can be addressed by the use of anti-reflection (AR) coatings, and currently around 90% of commercial PV modules are supplied with an AR coating applied to the cover glass, . The widespread use of AR coatings is a relatively recent development.
