

Balcony PV and micro inverters

Overview

What is a PM series microinverter?

The PM Series Microinverter is the ideal micro-inverter for balcony power plants, converting PV power from balcony power plants or roof installations in line with grid requirements and feeds it directly into the domestic grid, where it is immediately used.

How many panels can a microinverter connect?

With the output power up to 2000 VA, MUST new microinverter PM series rank among the higher for 2-in-1 microinverters. Each microinverter can connect up to 2 panels, with independent MPPT and monitoring maximizing the power production of your installation. No single point of failure.

What happens if a central inverter fails?

If a system with a central inverter fails, solar production will stop completely. With one microinverter per module, solar production keeps working even if a microinverter fails. The HPC1800 is designed for balcony energy storage systems.
