

Can solar panels be shipped in containers

Overview

Can you fit a lot of solar panels in a shipping container?

Most people don't know that you can actually fit a lot of solar panels in a shipping container. In fact, with the right configuration, you can fit enough panels to generate up to 100 kilowatts of power. That's a lot of energy! And it's enough to power several homes or businesses.

Is freight shipping necessary for solar panels?

Solar panels often require freight shipping services due to their oversize dimensions and the need for careful packaging. Freight shipping solar panels involves protecting the fragile cargo from damage during transit and ensuring careful and on-time delivery. It takes the right freight partner to ensure solar panels are transported safely.

How do solar panels get shipped?

Solar panels, such as those manufactured in Taiwan, are typically shipped via ocean freight to Long Beach, California. Subsequently, they may be transported via full truckload shipping to a distributor's warehouse in Miami, Florida. Large solar panels, like those used on solar farms, might require oversize freight shipping services.

Should solar panels be protected during shipping?

Solar panels are expensive and valuable, so protecting them during the shipping process is necessary. Solar panels are typically stacked in a box or crate prior to shipping. They can be stacked horizontally or vertically, depending on the panel's dimensions.
