

# **Communication emergency base station frequency**

## Overview

---

What are ham radio emergency frequencies?

Ham radio emergency frequencies are the frequencies that will be used when normal communication channels are down due to natural (or man made) disasters like tornados, hurricanes, earthquakes, floods etc. Here we shall have a look at different frequencies that you as a ham must be aware of for use during emergency situations.

What are the different types of emergency radio frequencies?

The most common emergency radio frequencies fall into several categories, such as amateur radio (ham radio), Family Radio Service (FRS), General Mobile Radio Service (GMRS), Multi-Use Radio Service (MURS), and specific federal disaster response frequencies.

What radio frequency is used for emergency use?

The EAS system is used across the United States and relies on a collection of radio frequencies in the 162 MHz range. Another spoken emergency signal is used by the Citizens Band (CB) radio service, a short-range radio communication system that operates on several channels designated for emergency use.

What are emergency services frequencies?

Emergency services frequencies are essential for first responders, such as police, firefighters, and paramedics, during crises. These frequencies facilitate coordination and communication between various responders, enabling them to efficiently address emergencies.
