

Container Energy Storage in North America

Overview

Which country is the largest market for energy storage in North America?

The United States is expected to be the largest market for energy storage in North America with an increasing demand for uninterrupted energy demand within the country. The country's power generation is dominated by coal and gas-fired power plants, and it is witnessing a shift from coal-based power generation to cleaner sources of energy.

Which energy storage segment will be the largest in North America?

Pumped-storage hydroelectricity (PSH) segment is expected to be the largest market during the forecast period in North America, owing to its ability to store large amount of energy as compared to other energy storage options and existing installed base. The Compressed air energy storage (CAES) can achieve an efficiency of 70-80%.

What is the largest battery storage facility in the world?

In the first quarter of 2019, 60 MW of utility-scale battery storage power capacity came online, and an additional 108 MW of installed capacity was expected to become operational. Out of these planned 2019 installations, the largest is the Top Gun Energy Storage facility in California, with 30 MW of installed capacity.

How many battery storage sites are there in the United States?

In the United States, 16 operating battery storage sites have an installed power capacity of 20 MW or greater. Out of the 899 MW of installed operating battery storage reported by the states, as of March 2019, California, Illinois, and Texas accounted for a little less than half of that storage capacity.
