

Cost of a 20kW Solar-Powered Containerized Mine in Australia

Overview

How much does a 20 kW solar system cost in Australia?

Many high-quality 20 kW systems in Australia in 2025 land around \$19,000–\$24,000, depending on component brands, installation complexity, and local incentives. Installed battery cost around \$1,200 per usable kWh. You should combine these two buckets to estimate your total project price: 20 kW PV only: ~\$19,000–\$24,000.

How much does a 20kW Solar System cost?

According to data from Solar Choice's installer network database, a fully installed 20kW system will cost roughly \$15,000 – \$22,000 as of August 2024. These figures include the up-front 'discount'/incentive available under the federal government's Renewable Energy Target for systems under 100kW in output capacity, as well as GST.

Can solar PV & wind power mining operations in Australia?

This clustering presents a promising opportunity for powering mining activities with solar PV and wind energy, thus facilitating the decarbonisation of mining operations in Australia through the utilisation of shared renewable energy infrastructures.

Is a 20kW Solar System a good investment?

With a daily power output north of 70kWh each day depending on your location and the position of your property, a 20kW solar system has the potential to generate enough power to pay for the upfront cost and become an ROI positive investment for most businesses in a few short years.
