

# Dual-panel solar on-site energy storage

## Overview

---

How can on-site solar PV & energy storage improve sustainability?

To achieve sustainability goals while meeting the increasing electricity demands of electrification, organizations are pairing on-site solar PV generation with on-site energy storage. These systems, which are considered as “behind-the-meter” (BTM) systems, allow facilities to maximize the benefits of on-site renewable generation.

How efficient is a solar thermal energy storage system?

The solar thermal energy storage efficiency  $\eta$  experiment of the MOST system has been determined to reach up to 2.3%, representing the highest recorded efficiency to date. <sup>34</sup> Additionally, the inclusion of the MOST system as a non-heating temperature stabilizer with optical filter effect can further enhance the efficiency of the PV cell.

Can a dual-tower solar system revolutionize the solar power industry?

The dual-tower system, as demonstrated in the Guazhou project, shows clear potential for revolutionizing the solar power industry through its innovative architecture and improved energy management capabilities. One of the most important contributions of the dual-tower CSP system is its remarkable improvement in optical efficiency.

Can a molecular solar thermal energy storage system be a hybrid device?

Two main issues are (1) PV systems' efficiency drops by 10%–25% due to heating, requiring more land area, and (2) current storage technologies, like batteries, rely on unsustainably sourced materials. This paper proposes a hybrid device combining a molecular solar thermal (MOST) energy storage system with PV cell.
