Overview

Will 10x Bess be installed by 2030?

Battery Storage Europe Platform launched last week with a call to 10X BESS installations by 2030. Image: SolarPower Europe The European Union (EU) will not meet its 2030 clean energy targets unless cumulative battery storage deployments rapidly accelerate, SolarPower Europe has said.

How will Gy storage affect Bess deployment in Europe?

gy storage targets continue to drive large-scale BESS deployment in Europe. As the transition to a decarbonised energy system progresses, the design of electricity markets must evolve to effect spinning reserves; grid balancing and stability; black start capability; etc.

What is the battery storage Europe platform?

The solar PV trade association launched the Battery Storage Europe Platform last week (1 July), which it describes as a “major new initiative to drive forward the business case and regulatory framework for battery storage across the European Union.”

How big is battery energy storage in Europe?

That came off the back of the industry deploying 21.9GWh of battery energy storage systems (BESS) across Europe with about 18.5GWh in the EU in 2024, including utility-scale, commercial and industrial (C&I) and residential. It marked the 11 th consecutive year of record-breaking growth.
