

# Energy Storage Power Overseas

## Overview

---

Why is China a leader in energy storage technology?

Li added that China's dominance in energy storage technology, particularly in battery cell production, places it in a leading position to shape global storage standards. At the end of the first half, power storage capacity in China surpassed 100 GW, reaching 103.3 GW, a 47 percent year-on-year increase.

How much energy storage capacity has China added in 2022?

China has added 21.5 GW of storage capacity so far this year, which is three times the amount added during the same period in 2022, accounting for 47 percent of the global increase, it said. China's momentum in energy storage reflects a blend of strategic policy support, technological innovation, and strong industry partnerships, said Li.

Is China's energy storage sector growing?

According to the report, China's energy storage sector has maintained a rapid growth momentum from 2023, with new energy storage capacity expanding from 8.7 million kilowatts in 2022 to 31.39 million kW last year. On the other hand, new energy storage plants in China are increasingly shifting toward centralized, large-scale installations, it said.

How big is China's energy storage capacity?

At the end of the first half, power storage capacity in China surpassed 100 GW, reaching 103.3 GW, a 47 percent year-on-year increase. New energy storage systems now account for nearly 50 percent of the total, with lithium battery storage maintaining a dominant position in this sector, said Li.
