

Energy storage indicators of energy storage power stations

Overview

How can energy storage power stations be evaluated?

For each typical application scenario, evaluation indicators reflecting energy storage characteristics will be proposed to form an evaluation system that can comprehensively evaluate the operation effects of various functions of energy storage power stations in the actual operation of the power grid.

What is the new energy storage statistical indicator system?

The new energy storage statistical indicator system is centered on five major first-level indicators, namely, energy efficiency statistics, reliability statistics, regulation statistics, economic statistics, and environmental protection statistics, as shown in Figure 1. Figure 1.

Which energy storage power station has the highest evaluation Value?

Calculation results of relative closeness. According to the evaluation values of the operational effectiveness of various energy storage power stations, station F has the highest evaluation value and station C has the lowest evaluation value.

How can energy storage power stations be improved?

Evaluating the actual operation of energy storage power stations, analyzing their advantages and disadvantages during actual operation and proposing targeted improvement measures for the shortcomings play an important role in improving the actual operation effect of energy storage (Zheng et al., 2014, Chao et al., 2024, Guanyang et al., 2023).
