

Energy storage power station temperature warning method

Overview

Why is early warning important in energy storage?

Lithium-ion battery storage power station in the event of thermal runaway and lead to fire or explosions, which are unimaginable. Therefore, early warning is the most important function in the safety and security system of the energy storage plant [1, 2].

How to secure the thermal safety of energy storage system?

To secure the thermal safety of the energy storage system, a multi-step ahead thermal warning network for the energy storage system based on the core temperature detection is developed in this paper. The thermal warning network utilizes the measurement difference and an integrated long and short-term memory network to process the input time series.

Why should energy storage power stations use thermal management technology?

The thermal management technology of energy storage power stations can ensure that batteries operate within the optimal temperature range, extend battery life while preventing thermal spread, and guarantee the safe, efficient, and long-life operation of the energy storage system.

Do energy storage power stations adopt multi-level early warning and fire control linkage?

According to the existing papers and the patents of early warning and fire control of energy storage power stations, most of the energy storage power stations adopt the strategy of multi-level early warning and fire control linkage.
