

French Lyon Liquid Flow Battery

Overview

Are redox flow batteries toxic?

However, the main redox flow batteries like iron-chromium or all-vanadium flow batteries have the dilemma of low voltage and toxic active elements. In this study, a green Eu-Ce acidic aqueous liquid flow battery with high voltage and non-toxic characteristics is reported. The Eu-Ce RFB has an ultrahigh single cell voltage of 1.96 V.

What is a flow battery?

A lot of flow battery systems are constructed using cerium species as the cathode active material, such as V-Ce , Zn-Ce , , and Fe-Ce . Europium is widely used in luminescent and catalytic materials. Its suitable redox potential (-0.35 V vs. SHE) makes it potential for application in the field of energy storage .

What are the different types of membrane-free flow batteries?

In this review, we summarize three types of membrane-free flow batteries, laminar flow batteries, immiscible flow batteries, and deposition-dissolution flow batteries, and systematically analyze the design principles, reaction mechanisms, and battery structure.

Are redox flow batteries suitable for large-scale electrochemical energy storage?

Due to the superiority of decoupled energy and power, high safety, and design flexibility, redox flow batteries (RFBs) have gained much attention as candidates for large-scale electrochemical energy storage.
