

# H6 solar Inverter Design

## Overview

---

Can H6 inverter reduce conduction loss in transformerless grid connected photovoltaic system?

The proposed H6 inverter can thus be a promising topology to eliminate leakage current and reduce conduction loss in the transformerless grid connected photovoltaic system. 1. Introduction In today's ever growing energy demand all over the world, photovoltaics (PV) are playing a pivotal role in catering this demand as a source of renewable energy.

What is H6 transformerless inverter?

Novel H6 transformerless inverter is proposed in this paper to eliminate the leakage current, reduce the conduction loss and increase the efficiency. The circuit for this inverter is shown in Figure 2.

Can H6 inverter reduce leakage current in a single phase PV system?

Thus, for a single phase grid connected PV system, the proposed novel H6 inverter can be a promising topology for eliminating leakage current, reducing conduction loss and enhancing the inverter efficiency.

How does a H6 inverter work?

This novel H6 inverter maintains constant common mode voltage and hence is responsible for eliminating the leakage current. This is achieved by modifying the H5 topology by inserting one switch between the negative terminal of the PV and the midpoint of the first leg of the bridge circuit.
