

High-Temperature Resistant Mobile Energy Storage Container for Weather Stations

Overview

What is energy storage container?

Energy Storage Container is an energy storage battery system, which includes a monitoring system, battery management unit, particular fire protection system, special air conditioner, energy storage converter, and isolation transformer developed for the needs of the mobile energy storage market.

What is high-temperature energy storage?

In high-temperature TES, energy is stored at temperatures ranging from 100°C to above 500°C. High-temperature technologies can be used for short- or long-term storage, similar to low-temperature technologies, and they can also be categorised as sensible, latent and thermochemical storage of heat and cooling (Table 6.4).

Why is high-temperature storage important?

High-temperature storage offers similar benefits to low-temperature storage (e.g. providing flexibility and lowering costs). However, high-temperature storage is especially useful for smart electrification of heating and cooling in industry, given that many industrial processes either require high temperatures or produce high-temperature heat.

What is CIMC TLC|RYC energy storage container?

CIMC TLC|RYC Energy Storage Container can integrate energy storage converters and energy management systems according to customer needs. It has the characteristics of simplified infrastructure construction cost, short construction period, high degree of modularization, and easy transportation and installation.
