# Home power master control box mobile

## Overview

---

What is a master control power strip?

**Master control:** These power strips have a “master” outlet for a major device like a computer or television. When this is turned on, the power strip returns power to peripheral devices plugged into other outlets. When the device in the master outlet is turned off, the other outlets cut their power to reduce standby power.

What is a smart home controller?

A smart home requires a home automation controller as its primary controller software or hardware instrument. This device allows you to manage and connect smart devices effortlessly to perform synchronized operations. The single interface is accessible through a home automation controller.

How do home automation controllers work?

The operation of home automation controllers occurs through wireless protocol connections that use Z Wave home automation controller protocol, Wi-Fi, and Bluetooth. After joining the system, the controller functions as the central processor for smart home management by exchanging control signals with devices.

Can you use a virtual home assistant with a smart power strip?

By using a virtual home assistant with your smart power strip, you can turn almost any device into a smart device by controlling it with voice commands. Inexpensive: At \$15 to \$20 are basic smart power strips that typically have a few outlets and one or two USB ports. Some of these are compatible with virtual home assistants.

FAQ  
Use your smart power strip to control and monitor the usage of devices you don't need on all the time. By setting a schedule for your power strip, you can control exactly when your devices draw power. Just like with regular power strips, you should never plug high-energy appliances like space heaters into a smart power strip. Here are some devices See more on bestreviews Occupation:
