How big an inverter should I use for outdoor camping

Overview

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

What are the different solar inverter sizes?

Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly. During our research, we discovered that most inverters range in size from 300 watts up to over 3000 watts. In this article, we guide you through the different inverter sizes.

Why should you choose a large inverter?

Large inverters consume extra power even while idle, increasing your battery drain. For example, using a 3000w inverter to power only small items like laptop chargers or games consoles, regularly wastes precious battery capacity and can reduce the lifespan of your battery bank. The ideal inverter size matches your real-world usage.

How much power can a campervan inverter take out?

Remember, you can only take out of your battery what you put in. Inverters for standard 12v campervan systems typically max out around 3000w. Manufacturers rarely produce larger models due to battery drain and wiring complexity. Similarly, 24v and 48v systems generally support inverter sizes up to about 4000w.
