## Overview

How many Watts Does a solar charge controller work?

That means a solar charge controller such as the Morning Star SS6L, 6-amp controller will work with nearly every panel we sell, right up to about 70 watts. Solar panel manufacturers rate solar output in watts. As a rule of thumb, a rating of 15 watts delivers about 3,600 coulombs (1 AH) per hour of direct sunlight.

How many watts a solar panel can charge a 150ah battery?

Battery Capacity x Voltage = 150Ah x 12V = 1800Wh. Required Solar Panel Size = 1800Wh / (5 hours x 4 hours) = 1800Wh / 20h = 90W. So, you would need a solar panel with at least 90W capacity to charge your 150Ah, 12V battery in 5 hours, considering 4 peak sun hours per day. Solar panel sizing is crucial in designing a solar power system.

What size solar panel do I Need?

Required Solar Panel Size (W): The sizes are quadruple those needed for 12V batteries with the same capacity, due to the higher voltage. A 100Ah 48V battery requires a 240W panel, while a 100Ah 12V battery needs a 60W panel. The higher the voltage of the battery, the larger the solar panel required to charge it, all else being equal.

Can I use a 24 volt solar charger on a 12 volt panel?

Most solar chargers are designed for 12 VDC, but we do have limited availability on a 24-volt panel. Typically, when 24 volts or greater is needed, solar panels may be wired in series, or we can special order solar panels that are made to deliver more DC Volts such as 24V, 36V, 48V etc.
