Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

What is energy storage container?

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.

Is pumped storage a cost-effective solution?

technologies fall by 22%. In the near term, pumped storage is a cost-effective solution at 6.9 crore/MW. Further reductions in this cost could result in delayed investment in battery storage. Operational modeling of the 2030 power system shows energy storage can play a major role in providing operating reserves in the future.
