## Overview

---

How much energy does a 12V battery store?

In energy terms, battery capacity is also linked to voltage. To determine the energy stored, measured in watt-hours (Wh), the formula is:  $\text{Energy (Wh)} = \text{Capacity (Ah)} \times \text{Voltage (V)}$  So a 12V battery with a 100 Ah capacity can theoretically provide  $12 \text{ V} \times 100 \text{ Ah} = 1200 \text{ Wh}$  or 1.2 kWh. This last formula is used in our Battery Capacity Calculator.

How much energy does a battery hold?

To calculate how much energy a battery holds in watt-hours, use: If your battery capacity is in mAh (milliamps), convert it to Ah first: You have a 12V battery rated at 100Ah. So it stores 1200 watt-hours of energy. If you're powering a 100-watt device:.

How much energy can a battery store?

This does not directly tell you how much energy the battery can store, but can be a more useful value in deciding how long a circuit will run from a battery. For example, a car battery might be rated for 50 Ah. That means in theory it could source 50 A continuously for 1 hour and then go dead.

What is battery capacity?

Battery capacity tells you how much energy a battery can store and deliver over time. It's usually expressed in: To calculate how much energy a battery holds in watt-hours, use: If your battery capacity is in mAh (milliamps), convert it to Ah first: You have a 12V battery rated at 100Ah. So it stores 1200 watt-hours of energy.
