## Overview

---

What are integrated solar flow batteries?

Integrated solar flow batteries (SFBs) are a new type of device that integrates solar energy conversion and electrochemical storage. In SFBs, the solar energy absorbed by photoelectrodes is converted into chemical energy by charging up redox couples dissolved in electrolyte solutions in contact with the photoelectrodes.

What are integrated solar flow batteries (SFBS)?

Conventional round-trip solar energy utilization systems typically rely on the combination of two or more separated devices to fulfill such requirements. Integrated solar flow batteries (SFBs) are a new type of device that integrates solar energy conversion and electrochemical storage.

Are solar flow batteries a solution to solar intermittency?

Nature Communications 12, Article number: 156 (2021) Cite this article  
Converting and storing solar energy and releasing it on demand by using solar flow batteries (SFBs) is a promising way to address the challenge of solar intermittency.

Are solar flow batteries efficient?

Solar flow batteries (SFBs) can convert, store and release intermittent solar energy but have been built with complex multi-junction solar cells. Here an efficient and stable SFB is shown with single-junction GaAs solar cells via rational potential match modeling and operating condition optimization.
