What is the function of isolation transformer in solar inverter?

What is the function of the isolation transformer in solar inverter?

Isolation transformer is a device designed to achieve complete electrical insulation between its primary and secondary sides, effectively isolating the circuit.

Do solar power converters need isolation?

In a solar power converter, high-voltage and low-voltage circuits co-exist. Isolations are required between the high-voltage and low-voltage circuits for both functional and safety purposes. Fundamental isolation concepts and terminology are presented in references [3-4]. Digital isolators can be used to address the isolation requirements.

Does an inverter need an isolation switch?

1. The requirement If the inverter is not adjacent to the switchboard to which it is connected, Clause 3.4.3 requires an isolation switch to be installed adjacent to the inverter. All live parts are either behind barriers or isolated automatically.

What is a solar inverter?

Solar inverter is a kind of equipment that converts direct current generated by solar panels into alternating current, which is an important part of photovoltaic system.
