

MODERNIZATION SOLAR

Italian photovoltaic container bidirectional charging

Overview

Could bidirectional charging Transform Europe's energy and mobility sectors?

A recent study by Transport & Environment (T&E) reveals that this innovative technology could transform Europe's energy and mobility sectors. By enabling electric vehicles to store electricity and feed it back into the grid, bidirectional charging (BiDi) offers immense economic and environmental benefits.

What is a bi-directional charging system?

This shift is made possible by the cutting-edge bi-directional charging technology. Bi-directional charging allows EVs to function as mobile energy storage units. Equipped with this technology, EVs can not only draw power from the grid but also return electricity to it, or supply power to homes during peak demand or in the event of blackouts.

Can a bidirectional EV battery be used as a home energy storage unit?

The bidirectional charger, developed in cooperation with Elli's partner CUBOS – a leading provider of sustainable energy solutions – enables the EV battery to be used as a home energy storage unit and powers households with self-generated solar energy.

Should electric vehicles be able to use bidirectional charging (Bidi)?

By enabling electric vehicles to store electricity and feed it back into the grid, bidirectional charging (BiDi) offers immense economic and environmental benefits. However, achieving this potential requires regulatory support and widespread adoption.
