

# **Liechtenstein Hybrid Pumped Storage Power Station Project**

## Overview

---

What is hybrid pumped storage hydropower station?

Hybrid pumped storage hydropower station adopts the scheduling principle of 'pumping at low electricity prices, generating at high electricity prices, with pumping and power generation are carried out at a staggered time'.

Can pumped storage hydropower plants be reconstructed by a pumping station?

The reconstruction of conventional cascade hydropower plants (CHP) into hybrid pumped storage hydropower plants (HPSH) by adding a pumping station has the potential to increase the hydropower's flexibility and promote the consumption of renewable energy into the power grid.

Does a hybrid pumped storage power station have a water flow hysteresis?

A hybrid pumped storage power station with two reservoirs and one pump is utilized. The natural runoff between the upper and lower reservoirs is ignored, and water flow hysteresis is not considered since the research does not involve a cascade hydropower station.

Can hydropower be combined with pumped storage power stations?

Combining conventional hydropower with pumped storage power stations can reduce wind and photovoltaic power curtailment levels, mitigate fluctuations in new energy, and improve the reliability of power grid operation.

## Liechtenstein Hybrid Pumped Storage Power Station Project
