

# Module Energy Storage Project

## Overview

---

What is a modular energy storage system?

One major trend is merging the energy storage system with modular electronics, resulting in fully controlled modular, reconfigurable storage, also known as modular multilevel energy storage.

What is an energy storage module?

An energy storage module is not a new concept, and the available technology in most modern large storages uses some form of a fixed module to form large packs [ 12, 71 ].

What is a modular Energy Storage System (MMS)?

Modular energy storage systems (MMSs) are not a new concept [ 11 ]. This work defines MMS as a structure with an arbitrary number of relatively similar modules stacked together. Such structures often have none or minimal reconfigurability through controlled mechanical switches or limited electrical circuitries [ 12 ].

What are the four types of energy storage technologies?

This marks the first domestic shared storage demonstration project to integrate four types of new energy storage technologies—lithium iron phosphate, sodium-ion, vanadium flow, and flywheel storage—signaling a transformative step toward high-quality construction and efficient utilization of storage systems.
