Overview

Is Palestine a good place for solar energy?

With 3,400 hours of sunlight per year and an average daily global solar radiation ranging from 6.15 to 8.27 kWh/m², Palestine has a great potential for solar energy. The capacity of rooftop solar systems to produce power in the WB and GS is 534 and 163 MW, respectively.

Does Palestine have a potential for PV power generation?

The System Advisor Model software (SAM) was used to predict the power potentials for a year. The results indicate that Palestine has a significant potential for PV power generation within 1,700 kWh/kWp.

Does Palestine use solar water heaters?

Even though solar water heaters are widely used in Palestine, solar thermal energy only accounts for 8 % of the country's total energy consumption. In WB, 63.1 % of houses had solar water heaters in 2019, while the GS figure was 43.8 % and produced more than 600 GWh.

What is the average yield factor of solar systems in Palestine?

According to their research, the average yield factor of solar systems in Palestine is between 1,368 and 1,816 kWh/kWp annually, with a payback period between 5.7 and 7.4 years.
