

# Production Line Battery Cabinet

## Overview

---

How does a battery production line work?

1. Entering the Production Line and Sorting First, the battery cells are put into the production line manually, then the production line equipment automatically scans the battery cells, and at the same time carries out the internal resistance and voltage test, in order to screen out the battery cells with qualified quality. 2.

What is a lithium-ion battery module & pack line?

The lithium-ion battery module and pack line is a key component in the field of modern battery technology. Its high degree of automation and rigorous process flow ensure high quality and efficiency in production.

What is battery cell stacking?

Battery Cell Stacking Battery Cell stacking is a critical step. In this process, the battery cells are stacked together in a specific arrangement and secured with spacers and end plates to form the basic structure of a battery module. 3.  
Terminal Testing and CCD Addressing
