

# Smart Computing New Energy Storage

## Overview

---

Are smart grid transactions decentralized?

To validate the decentralized energy trading mechanisms, blockchain-based smart grid transaction logs were analyzed. The dataset includes Peer-to-peer (P2P) transactions of surplus solar energy within a smart grid network and AI-powered energy pricing models optimized for demand-response efficiency.

How many electrochemical storage stations are there in 2022?

In 2022, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4).

What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

Will the energy storage industry thrive in the next stage?

The energy storage industry is going through a critical period of transition from the early commercial stage to development on a large scale. Whether it can thrive in the next stage depends on its economics.

## Smart Computing New Energy Storage
