

Solar Street Light Hardware System

Overview

What is a solar street light?

A solar street light is a raised lighting system powered by a photovoltaic (PV) module charging a battery that runs an LED luminaire at night. Modern systems are off-grid, smart-controlled, and designed to operate through low-sun periods. Pole/brackets & wiring, optional sensors/remote monitoring.

How do solar street lights work?

Solar street lights use several key components. Each one has a specific job. The solar panel captures sunlight, the battery stores it, and the LED converts it into bright light. The controller orchestrates these parts. The hardware housing keeps them safe. Understanding each component leads to better decisions.

How to design a solar street light?

1. Solar Street Lighting Demand Design Formula: $P_{LED} = E \times A / (\eta \times U \times K)$
Example: Road width 6m, distance between lights 25m, target illuminance 20 lx → $P_{LED} = 20 \times (6 \times 25) / (0.85 \times 0.5 \times 0.75) = 20 \times 150 / 0.32 \approx 94W$ → Choose a 100W LED module (Luminous flux 15,000 lm)
2. Solar Street Light Photovoltaic System Capacity Calculation Steps: 3.

Which solar street lights are available?

Our All-In-One Solar Street Light is available in the SIRIUS (INL-AIO9), GALAXY (INL-AIO6), ALIEN (INL-AIO5), and POLARIS (INL-AIO2) series. Utilizing the latest integrated design, the lithium battery, solar controller, and solar panel are all housed within the light casing.
