

Solar energy on-site free charging 8 million

Overview

How many solar EV charging stations will India need?

India alone is projected to require 2.9 million public charging stations by 2030 to support an estimated 102 million EVs (ref). Solar EV charging stations serve dual purposes: advancing electric vehicle adoption while maximizing renewable energy utilization.

Are solar charging stations right for your business?

Whether you're looking to charge an e-bike during your daily commute, provide convenient charging options for your business's electric delivery vehicles, or make sure your electric car has enough power for your return journey, solar charging stations offer an elegant solution that aligns with the clean energy future we're building.

What is a solar EV charging station?

Solar EV charging stations serve dual purposes: advancing electric vehicle adoption while maximizing renewable energy utilization. The integration of solar power addresses multiple challenges including grid strain, energy cost reduction, and carbon footprint minimization.

How long does it take to charge a solar car?

The charging process varies depending on the vehicle type. For electric cars, most solar stations offer Level 2 charging (providing 25-30 miles of range per hour of charging) or DC fast charging (providing up to 100-200 miles of range in just 30 minutes).
