Solar glass installation effect in London

Overview

Can solar control glass reduce solar gain?

For existing buildings, solar control glass can be used to reduce solar gain and help to avoid overheating. Solar control glass is specially designed to reduce solar gain and if combined with a low-e glass it can also retain heat in cooler months for perfect climate control.

Could solar glass revolutionise the way we construct & power our homes?

Solar glass or photovoltaic glass is an emerging technology could revolutionise the way we construct & power our homes by making it possible for our windows to generate free, renewable electricity. Find out more [here](#).

Is solar control glass a good investment?

With an increased need to reduce overheating in homes, solar control glass has seen an increase in demand. Our guide explains everything you need to know. Solar gain through glass and windows can be either a positive or a negative depending on where you live and what time of year it is.

Why are we not installing solar windows?

The reason why we are not installing solar windows is that at the moment the photovoltaic glass being produced is not transparent so would be ineffective as a straight replacement for window glass. If the glass is made to appear transparent, it will not be able to absorb enough energy to generate electricity at any meaningful level.
