

# **Solar panels of different powers**

## Overview

---

What are the different types of solar panels?

Discover the six main types of solar panel, including thin-film, perovskite, and the best type for your home: monocrystalline. What kind of home do you live in?

When you're considering whether to get solar panels, it's a good idea to look into all the different types, to ensure you choose the best system for your home.

What type of solar panel should I choose?

The type of solar panel you should choose depends on the type of system you want to install. For a traditional rooftop solar panel system, you'll usually want monocrystalline panels due to their high efficiency. If you have a big roof with a lot of space, you might choose polycrystalline panels to save money upfront.

What factors determine the voltage of a solar panel?

Factors such as solar panel type, number of panels in an array, and sunlight intensity determine the voltage of a solar panel. Cell type: There are numerous types of solar cells, but the four main types are monocrystalline, polycrystalline, PERC, and thin-film.

What are the different types of voltage associated with solar panels?

There are five types of voltage associated with solar panels. These are voltage at open circuit, voltage at maximum power, nominal voltage, temperature corrected VOC, and temperature coefficient of voltage. Factors such as solar panel type, number of panels in an array, and sunlight intensity determine the voltage of a solar panel.
