

Soldering iron battery pack

Overview

How do you solder a battery?

Before soldering, use sandpaper to scratch the top and bottom sides of the cell, removing the oxide layer. This will help the solder adhere better. “Tin” both sides of the batteries with a small amount of solder, allowing it to cool down before soldering the wires. Keep the time your soldering iron touches the battery terminals to a minimum.

Does a soldering iron heat up a battery?

Keep the time your soldering iron touches the battery terminals to a minimum. The longer the iron is in contact with the battery, the more heat will build up. To accomplish this, use a powerful, temperature-controlled soldering iron.

What are the products in the soldering iron kit?

The Easy Electronics Soldering Iron Kit consists of six products: a 25w soldering iron kit, soldering wire reel, flux, D-sold wire, and a soldering iron stand. The kit includes a lightweight soldering stand to hold the hot soldering iron while working.

What happens if you solder a lithium ion battery?

Soldering Li-ion batteries, such as 18650 cells, can be dangerous. Overheating may cause the battery to catch fire and explode. If you decide to solder a battery, you do so at your own risk. Some of the links on this page are affiliate links.
