# Storage temperature requirements for energy storage batteries

## Overview

---

What temperature should a battery be stored in?

Store batteries at 10-25°C and 40-60% SOC. Avoid temperatures above 30°C or below -20°C. Use climate-controlled environments to mitigate risks of thermal runaway or capacity loss. By adhering to these guidelines, users can extend battery life, reduce safety hazards, and optimize energy retention in devices ranging from EVs to solar storage systems.

What temperature should a lithium battery be stored at?

Storing lithium batteries at 15-25°C and 30-50% RH isn't just about following specs—it's about protecting your investment. Whether you're a consumer storing power tools or a business managing inventory, these conditions minimize risks and maximize battery life.

What temperature should a lithium ion battery be charged?

Lithium-ion batteries operate and store energy within specific thermal thresholds. Here's a breakdown of their li-ion temperature range: Operating Temperature: Most Li-ion batteries function optimally between -20°C to 60°C (-4°F to 140°F) during use. However, charging is safest between 0°C to 45°C (32°F to 113°F).

Are battery energy-storage technologies necessary for grid-scale energy storage?

The rise in renewable energy utilization is increasing demand for battery energy-storage technologies (BESTs). BESTs based on lithium-ion batteries are being developed and deployed. However, this technology alone does not meet all the requirements for grid-scale energy storage.
