

Super wind power capacity

Overview

How many kilowatts a year is wind power?

Wind power installed capacity in the country reached 490 million kilowatts at the end of November, rising 19.2 percent year on year, according to data from the National Energy Administration. Solar power capacity surged 46.7 percent to about 820 million kilowatts last month, the data showed.

How big is China's Wind power?

This is roughly four times the global average for capacity under construction (9%). China's wind capacity follows a similar rate of growth as solar, according to Global Energy Monitor's Global Wind Power Tracker, with over 590 GW in prospective phases — nearly 530 GW of onshore capacity and 63 GW of offshore capacity.

Does China have a good wind power generation capacity?

China's installed wind power generation capacity has consistently ranked first in the world for an impressive 15-year streak, according to the latest data released by the China Electricity Council on Sunday.

How much wind power did China add in 2023?

According to the Global Wind Energy Council, an international trade association for the wind power industry, China added 75 gigawatts of wind power installed capacity in 2023, accounting for nearly 65 percent of new wind power installed capacity worldwide.
