The role of the New Delhi BMS battery management system

Overview

What is battery management system (BMS)?

Battery Management System (BMS) is an electronic unit designed to monitor, control and optimize the performance of multi-cell lithium-ion battery packs. As a crucial component, BMS acts as the brain of a battery pack. It exclusively monitors temperature, voltage, and current to prevent overcharging, discharging, and overheating.

What is a battery management system?

The battery management system is an electronic system that controls and protects a rechargeable battery to guarantee its best performance, longevity, and safety. The BMS tracks the battery's condition, generates secondary data, and generates critical information reports.

What is a battery management system in electric vehicles?

A battery management system in electric vehicles works to play a key role in maintaining the battery efficiency, safety, as well as the longevity. With new advancements in the tech world, modern EV battery management systems are becoming better for providing higher control and predictive tools.

Why do companies use BMS in electric vehicles?

You will find that companies never compromise with EV's BMS in electric vehicles because it works as a safeguard against risky battery hazards. The system detects risks such as: In case of a problem, the electric vehicle battery system quickly disconnects the battery from the vehicle's power network.
