

Three-input and three-output uninterruptible power supply

Overview

What is a three phase uninterruptible power supply (UPS)?

Three phase uninterruptible power supplies (UPS) operate in conjunction with existing electrical systems to provide power conditioning, back-up protection, and distribution for electronic equipment loads that use three phase power.

What is an Uninterruptible Power Supply (UPS)?

An Uninterruptible Power Supply (UPS) can supply voltage long enough for you to shut all your equipment down in the event of a power failure or power line down in a storm. It is better to shut off equipment normally than to have it suddenly lose power.

What are the input/output options for a Smart UPS system?

The input/output method options are 1/1, 1/3, 3/1, 3/3 phase mode, and support rack-mount or tower mounting options. Smart UPS On-line 20kVA RM/RT 400V This is a smart on-line UPS system with module power of 20kVA, and with the input/output method of 1/1, 1/3, 3/1, Or 3/3 phase mode, and supports rack-mount or tower mounting options.

What is a three phase UPS system?

A three phase supply will deliver more and higher constant electrical power than a single phase power supply, making the three phase standalone UPS system an ideal choice to protect larger applications such as communication rooms, data centers and switch rooms, industrial manufacturing plants and more.
