

Tonga mining uninterruptible power supply sales

Overview

What is the global uninterruptible power supply (UPS) market size?

The global uninterruptible power supply (UPS) market size was USD 12.70 Billion in 2023 and is likely to reach USD 25.30 Billion by 2032, expanding at a CAGR of 7.96 % during 2024–2032. The market growth is attributed to the rising advancement in battery technology and increasing digitalization.

What is uninterruptible power supply (UPS)?

Uninterruptible power supply (UPS) is widely deployed in data centers, telecommunications, healthcare, and industrial settings as it provides an uninterrupted power supply in the event of a power outage, ensuring that operations continue without disruption.

How digitalization affects the demand for uninterruptible power supply (UPS)?

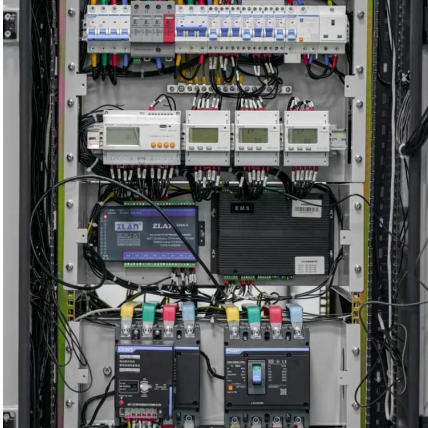

Increasing digitalization is expected to boost the demand for uninterruptible power supply (UPS). Digitalization heavily relies on computers, servers, and other IT equipment. These devices require a constant and stable power supply, which a UPS system provides. Therefore, the rising digitalization worldwide is propelling the market.

How to create a redundant power supply system?

A redundant power supply system is created by connecting two power supply units in parallel. Optimize this solution with the active redundancy modules and the diode modules to maximize system availability. The QUINT ORING modules permanently monitor the input voltage, the output current, and the decoupling section.
