## Overview

---

Where can I find information about mobile phone base stations?

Information about proposed and current mobile phone base stations is available on the Radio Frequency National Site Archive (RFNSA) at [You can subscribe to receive information about future installations of Small cells](#) are installed by Telcos to provide improved coverage and capacity in local areas for both 4G and 5G services.

What is a mobile base station?

A mobile base station, also called a base transceiver station (BTS), is a fixed radio transceiver in any mobile communication network or wide area network (WAN). The base station connects mobile devices to the network and routes them to other terminals in the network or to the core network of a mobile operator. [Read more Explore Mobile base.](#)

What is a base station in a wireless network?

An integral part of a wireless communication network, a base station (often known as a repeater) enhances the radio coverage and reliability of a system. It is a fixed transceiver that connects one or more wireless networks for communication purposes, capable of sending and receiving wireless signals.

Who decides the location and timing of mobile phone base stations?

The location and timing for the deployment of mobile phone base stations are commercial decisions determined by the relevant Telco having identified areas which would provide the greatest coverage for use by the community. The Australian Government does not have a role in these decisions.
