What is an uninterruptible power supply?

An uninterruptible power supply is a constant voltage and constant frequency uninterruptible power supply that contains an energy storage device and uses an inverter as the main component. Its main function is to provide uninterrupted power supply for a single computer, computer network system or other power electronic equipment.

What is a ups & how does it work?

What Is a UPS?

A UPS, or an uninterruptible power supply system, is an electrical device designed to provide emergency power to a load when the input power source fails. Not to be confused with an auxiliary or emergency power system, a UPS provides near instantaneous protection from input power outages via battery power [source: USAID].

What is uninterrupted power supply (UPS)?

Uninterrupted Power Supply (UPS) is a device that delivers emergency power to a load when the main power source fails. This capability is primarily achieved through a battery or other energy storage device, supplemented by an inverter that converts the DC power from the battery to AC power.

Why is uninterrupted power supply important?
