## Overview

---

What is a telecom energy storage system (TESS)?

Ensure seamless telecom operations with GSL Energy's Telecom Energy Storage Systems (TESS). Designed for cell towers, data centers, and network equipment, our telecom battery systems provide reliable backup power, optimize energy use, and reduce costs.

What is a containerized battery energy storage system?

Let's dive in! What are containerized BESS?

Containerized Battery Energy Storage Systems (BESS) are essentially large batteries housed within storage containers. These systems are designed to store energy from renewable sources or the grid and release it when required. This setup offers a modular and scalable solution to energy storage.

How can energy storage help a telecom network?

Impact: By using stored energy during peak times, telecom networks can operate more cost-effectively, avoiding the higher costs associated with grid-supplied power during these periods. How it Works: Energy storage systems can be paired with renewable energy sources like solar panels.

How do energy storage systems work?

How it Works: Energy storage systems, particularly battery energy storage systems (BESS), provide a reliable backup power source during power outages. Benefits: These systems ensure uninterrupted operation of telecom towers during grid disturbances like blackouts, maintaining essential network connectivity.
