

# **Who is responsible for the management of the EMS of the rooftop solar container communication station**

## Overview

---

Who is involved in an Environmental Management System (EMS) under ISO 14001?

In an Environmental Management System (EMS) under ISO 14001, key stakeholders include customers, employees, suppliers, regulators, local communities, and investors. Each stakeholder group has unique interests and impacts on the organisation's environmental performance.

What are the roles and responsibilities of an EMS?

These roles include top management, EMS managers, and employees, each with specific responsibilities and authorities to ensure the system's success. Responsibilities within an EMS are assigned based on the organisation's structure and the specific requirements of ISO 14001.

Who is responsible for ensuring EMS compliance?

It is explained that top management retains the responsibility for ensuring the EMS conforms to the standard itself, and that responsibility is assigned for reporting results to the top management team.

How do I document EMS roles & responsibilities?

One of the easiest ways to achieve this is to document the roles and responsibilities using ISO 14001 software such as the ISOvA Toolbox, which has a list of predefined EMS Roles and Responsibilities including Environmental Manager, Top Management, Process Owners and All Staff.
