

# Wholesale battery and storage in Chile

## Overview

---

Are battery energy storage systems a viable alternative for Chilean power producers?

With transmission lines at overcapacity and permitting delays slowing the development of new grid infrastructure, battery energy storage systems (BESS) have surged as a profitable alternative for Chilean power producers.

How much does a battery cost in Chile?

In fact, batteries charged at nearly \$0/MWh during the day in the sunny, northern desert regions of Chile, sell energy at night for over \$100/MWh. Although projects such as Engie's BESS Coya are already enjoying these large spreads, this capacity payment will partially de-risk Chile's dependence on volatile, but still profitable, merchant revenues.

Do Chilean co-located storage assets need an environmental impact statement?

Since Chilean co-located storage assets don't require an Environmental Impact Statement (known locally as the DIA), development times for storage assets have been cut in half compared to solar or wind assets.

How many kWh are in a battery storage container?

Each battery energy storage container unit is composed of 16 165.89 kWh battery cabinets, junction cabinets, power distribution cabinets, as well as battery management system (BMS), and the auxiliary systems of distribution, environmental control, fire protection, illumination, etc. inside the container; the battery container is 40 feet in size.
