

# **Wind-solar hybrid wind turbine system**

## Overview

---

What is a hybrid solar wind energy system?

The rising demand for renewable energy has recently spurred notable advancements in hybrid energy systems that utilize solar and wind power. The Hybrid Solar Wind Energy System (HSWES) integrates wind turbines with solar energy systems. This research project aims to develop effective modeling and control techniques for a grid-connected HSWES.

What is a wind-solar hybrid system?

It's simple! Wind turbines and solar panels are the two main components of a wind-solar hybrid system. When the wind blows, wind turbines convert kinetic energy from the wind into electrical energy, while when the sun shines, solar panels generate electricity from sunlight.

How do solar and wind hybrid systems work?

Solar and wind hybrid systems typically require less stringent battery storage technology than singular solar or wind energy systems, reducing overall storage needs. In regions where land is scarce, hybrid systems maximize energy generation by using the same land for solar panels and wind turbines.

Is a hybrid wind and solar energy system right for You?

A stand-alone, hybrid wind plus solar energy system can be a great option in these scenarios, especially when paired with energy storage. At a higher grid-scale level, pairing solar and wind energy systems allows renewable developers to participate to a greater degree in deregulated electricity markets.

## Wind-solar hybrid wind turbine system
